Socket ticket API

Talo provides a secure socket system for real-time communication between your game and players. The Talo Socket is the underlying server that powers services like channels and handles connections, messages and events.

To connect to the socket server, you need to obtain a socket ticket. Learn more about socket authentication here.

Endpoints

Create a socket ticket

`POST` `https://api.trytalo.com/v1/socket-tickets`

The ticket is valid for 5 minutes and can only be used once.
